CURRICULUM REDESIGN · PUBLIC RELEASE OCTOBER 2026

Bitcoin Diploma 2026

Reorganized, not replaced. A shorter, clearer, more practical pathway — carrying the same mission, the same open-source model, and the same community leadership.

What Stays The Same

Everything that made the Diploma worth defending is untouch
commitments hold the program together, and none of them a

01

Open Source

Free to use, adapt and translate. Every material stays publicly available to anyone who wants to teach.

02

Community-Led

Nodes deliver the Diploma in their own communities. We scale by empowering local educators, not by centralizing.

The redesign changes the learning experience, not the mission.

What Changes

TODAY	FROM
Long and dense pathway	An 8-h
Beginner and advanced material mixed	Core,
Activities embedded inconsistently	A dedi
Educator support uneven	An Edu
Assessment varies by cohort	Share
Local adaptation unclear	An edu

Shorter, but not shallower.

Nothing of value is being deleted. Legacy material is being re-placed: money origins into Block 2, wallets and verification into Block 3, local money use in technical, philosophical and future-facing content into Advanced pathways.

The Four-Block Pathway

01 · PROBLEM

Fiat

Why money exists, its functions and properties, scarcity and exchange, inflation and purchasing power.

Learners can explain why fiat money is the problem Bitcoin responds to.

02 · SOLUTION

Bitcoin

Why Bitcoin was created, decentralization, finite supply, peer-to-peer transfer, users, nodes and miners.

Learners can explain Bitcoin as the solution and how it differs from fiat money.

03 · A

basic s**

One coherent story: the problem, the solution, the action, and the local

BLOCK 04 · CUSTOM

Educators Complete The Local Story

The fourth block is chosen by the educator, from a bank of modules and activity templates. Educators are community leaders: they understand local needs, tools, risks and opportunities better than a centralized curriculum ever can.

Practical skills in this block are structured with PPP — Presentation, Practice, Production — so workshops and demonstrations produce evidence an educator can actually assess.

Local relevance increases without weakening the standard.

A Learning And Assessment

THE PARTS THAT WORK TOGETHER

Student Book	Understanding, reflection, key concepts
Educator Guide	Pacing, facilitation, classroom decisions
Activity Bank	Practice, participation, local adaptation
My First Bitcoin app	Micro-learning, knowledge checks, progress
Trained educators	Observed practical competency assessment
Advanced pathways	Depth without overloading beginners

Help build it: activities, visuals, educator tools and translations — b
